

Yay, you read me.

Creating & Removing Directories

To delete a file we use

```
fs.unlink("wolfeme.txt");
```

↳ here we have file name to delete

② Can create files in two ways

1. Synchronously

2. Asynchronously

F. Synchronously (create)

```
var fs = require('fs');
```

```
fs.mkdirSync('stuff');
```

to create directory

↳ name of file that we create

to remove

```
fs.rmdirSync('stuff');
```

2- ~~Synchronous~~

var fs = require('fs') ^{callback function}
fs.mkdir('stuff', function() {

fs.readFile('readMe.txt', 'utf8', function(err, data) {

fs.writeFile('./stuff/writeMe.txt', data);

});

});

↓
in stuff directory we
creating writeMe.txt file

To remove files

- to remove file in directory.

fs.unlink('./stuff/writeMe.txt', function() {

fs.rmdir('stuff');

});
